

## **Subject Area: Design & Technology**

### **Syllabus Code: 4120**

Students can choose between two areas of specialisation;

- In depth study **Option 1** involves students learning about and specialising in Electronic and Mechanical Systems.
- In depth study **Option 2** involves students learning about and specialising in Ferrous and Nonferrous metals.

Students will create a range of practical outcomes solving a wide variety of design and make problems across both options. They will specialise in either option 1 or 2, but experience very similar course content.

Students are **not** able to choose both options to study as two separate GCSEs, as they have the same Syllabus code.
