

Year 9

Compulsory Core

Subjects

Subject Area: English Language

Syllabus Code: Eduqas C700U10-1

There is one, single tier paper to be taken by all students.

All texts in the examinations are unseen.

TOPIC	AREAS COVERED	SPECIFIC	TIMESCALE
English Language Component 1: 20th Century Literature Reading and Creative Prose Writing 40%	Section A Reading Comprehension: analysis of one C20th story extract followed by 5 questions. Section B Creative Writing: one creative writing task inspired by a choice of 4 titles or sentence starters about 450-600 words	40% of GCSE	1 hour 45 minutes examination
English Language Component 2: C19th and C21st Century Non-Fiction Reading	Section A Reading Comprehension: analysis and comparison of two non-fiction text from the C19th and C20th. Section B Non-Fiction Writing: two short transactional persuasive writing tasks approximately 300-400 words.	60% of GCSE	2 hours examination
Component 3 Spoken Language: Compulsory Non-Examination Assessment	One formal presentation/speech, followed by a formal question and answer session.	pass, merit or distinction grade.	Internal teacher assessment and moderation to take place in Year 10.

For further information contact Ms Jhall, Head of Department for English: rjhall@blessededward.co.uk

Subject Area: English Literature
Syllabus Code: EDUQAS C721PC

There is one, single tier paper to be taken by all students.

In years 10 and 11 pupils will study all relevant set texts in year 10 and the poetry anthology in year 11.

TOPIC	AREAS COVERED	SPECIFIC	TIMESCALE
English Literature Component 1: Shakespeare and Poetry	Section A: Shakespeare's The Merchant of Venice. Section B: Poetry Anthology. 18 pre-studied poems.	40% of GCSE	2 hours examination
English Literature Component 2: Post-1914 Prose/Drama, 19th Century Prose and Unseen Poetry	Section A: Post-1914 Prose/Drama An Inspector Calls Section B: 19th Century Prose A Christmas Carol Section C: Unseen Poetry 2 unstudied modern poems	60% of GCSE	2.5 hours examination

For further information contact Ms Jhall, Head of Department for English: rjhall@blessededward.co.uk

Subject Area: MATHEMATICS

Syllabus Code: OCR J560

TOPIC	AREAS COVERED	SPECIFIC	TIMESCALE
Using and Applying Mathematics	<ul style="list-style-type: none"> a) pose their own questions a task in a given context b) examine critically the mathematical presentation of information c) make a generalisation giving some degree of justification d) follow new lines of enquiry when investigating within mathematics to solve a real-life problem e) examine and comment constructively on generalisations or solutions f) give logical accounts of work with reasons for choices made g) understand the role of counter-examples in disproving generalisations or hypotheses 	Functional skills are now embedded into the new GCSE examination.	<p>1. Students commence the OCR GCSE J560 course in year 9 and are arranged in nine ability sets. Year 10 and 11 students are working towards the final Key Stage 4 assessment and therefore the listed areas will appear in the appropriate GCSE syllabus. (http://www.ocr.org.uk/qualifications/gcse-mathematics-j560-from-2015/)</p> <p>Using and applying Mathematics will be assessed through the GCSE examination. Students solve problems relating to the real world in groups or pairs in the classroom.</p>
Number	<ul style="list-style-type: none"> a) calculate with fractions, decimals, percentages or ratio as appropriate b) use estimation to check calculations c) multiply and divide mentally single-digit multiples of any power of 10 d) use a calculator efficiently when solving problems e) recognise that a measurement is approximate and choose the degree of accuracy appropriate for a particular purpose f) calculate with numbers expressed in standard form g) evaluate formulae, including the use of fractions or negative numbers h) solve numerical problems, checking that the results are of the right order of magnitude i) index notation, calculation and estimation of powers and roots j) laws of indices k) manipulation of surds 	Homework is set each week which is a review of previous classwork and on occasions will be online assessed worksheets. Homework is usually peer marked and common mistakes are identified by the teacher and covered in feedback lessons that take place every 3 weeks.	<p>2. The higher ability sets will be expected to cover the large majority of the listed areas within each topic and in fact to extend these to higher levels of the National Curriculum in places. Gifted and talented mathematicians are given the option of studying for the AQA further mathematics qualification in year 11.</p>
Algebra	<ul style="list-style-type: none"> a) explore number patterns using computer facilities or otherwise b) solve simple patterns c) use and plot Cartesian coordinates to represent mapping d) use symbolic notation to express the rules of sequences e) solve equations or simple inequalities f) manipulate algebraic formulae, equations or expressions g) solve double inequalities h) interpret graphs which represent particular relationships i) use kinematic formulae 	Students are assessed by the teacher each term on the content they have covered. Students who are underperforming are identified and intervention is put into place if it is felt appropriate. At the end of Year 10, students sit an examination	<p>3. Lower ability pupils would only experience a selection of the listed areas and in fact sometimes will be working on consolidating topics.</p>

	<ul style="list-style-type: none"> j) interpret gradients on time distance graphs as velocity k) interpret gradients in time velocity graphs as acceleration 	consisting of one non-calculator and one calculator paper in a GCSE format.	
Ratio Proportion and rates of change	<ul style="list-style-type: none"> a) calculating ratios and proportion of quantities b) solve direct and indirect proportion problems c) solve growth and decay problems 	In November and February Year 11 students sit two GCSE past papers for their mock examinations.	
Geometry and Measures	<ul style="list-style-type: none"> a) use 2-D representation of 3-D objects b) transform shapes using a computer or otherwise c) understand and use bearings to define direction d) demonstrate that they know and can use the formulae for finding the areas and circumferences of circles e) determine the locus of an object which is moving subject to a rule f) use Pythagoras' theorem g) carry out calculations in plane and solid shapes h) use the mathematical similarity to solve problems i) use sine, cosine or tangent in right-angled triangles j) know and use the exact trigonometric ratios k) use sine and cosine rule in non-right angled triangles l) distinguish between formulae by considering dimensions 	During Years 10 and 11 students should gain further IT experience through packages aimed at investigating sequences further and handling various graphical and statistical functions	
Statistics	<ul style="list-style-type: none"> a) design and use a questionnaire to survey opinion b) understand and use the basic ideas of correlation c) design and use a questionnaire or experiment to test a hypothesis d) group data to draw a cumulative frequency curve or histogram e) understand different sampling methods f) calculate the mean mode and median from data sets and make simple comparisons g) recognise misleading graphs 	All five attainment targets are examined in internal examinations in Year 10 and external examinations in 11.	
Probability	<ul style="list-style-type: none"> a) identify all the outcomes of combining two independent events b) know that the total probability of all the mutually exclusive outcomes of an event is 1 c) organise and analyse data d) understand and use relative frequency as an estimate of probability 	The J560 GCSE examination consists of three papers: one non-calculator and two calculator papers. There are two tiers – Foundation and	The new GCSE OCR J560 is graded 9 to 1. The first examination was offered in the summer of 2017. Grade 5 and above is regarded as a strong pass. There are three examination papers of 1.5 hours each with 100 marks: one paper non-calculator and two calculator

	<p>e) give the probability of exclusive events, calculate the probability of a combined event</p> <p>f) calculate the probability of a combined event given the probabilities of independent events</p> <p>g) use Venn diagrams to calculate related probabilities</p>	<p>Higher. The Foundation Tier examines grades 5 to 1 and the Higher Tier examines grades 4 to 9. Each paper in each tier is 1.5 hours long and worth one third of the overall grade.</p>	<p>papers. The Higher Tier will cover 50% of the grade 7, 8 and 9 content and 50% of grade 4, 5 and 6 content. There is a 20% overlap in content on the Foundation and Higher Tier papers.</p>

Subject Area: RELIGIOUS STUDIES

Syllabus Code: Eduqas 601/8879/0 (C120PB)

YEAR 10

TOPIC	AREAS COVERED	ASSESSMENTS	TIMESCALE
<p>Component 3: Judaism beliefs and practices</p> <p>20 % of the course.</p>	<p>Part 1: Beliefs and teachings – For example the nature and role of the Jewish Messiah, Abraham, Moses and Jewish beliefs about the afterlife.</p> <p>Part 2: Practices – For example the study of festivals such as Shabbat. Rites and rituals from Brit Milah to Weddings and worship in the Synagogue and the home</p>	<p>Specimen paper questions.</p> <p>Open and closed style examination questions.</p> <p>Mock examination in May 2020.</p>	<p>September to December</p>
<p>Component 1: Foundational Catholic Theology</p> <p>40 % of the course.</p>	<p>Part 1: Origins and Meanings – The study of science and theology, the sanctity of life, stewardship and Catholic Social Teachings</p> <p>Part 2: Good and Evil – The study of theodicies, the Incarnation, Pilgrimage and worship.</p>	<p>Compare and contrast textual and symbolic features of the Catholic faith, other Christians, Judaism and non-religious beliefs such as those held by Humanists.</p>	<p>January to July</p>

YEAR 11

TOPIC	AREAS COVERED	ASSESSMENTS	TIMESCALE
<p>Component 2: Applied Catholic Theology</p> <p>40 % of the course.</p>	<p>Part 1: Life and death– The study of Eschatology, Euthanasia and end of life care, prayer and funerals.</p> <p>Part 2: Sin and forgiven – The study of salvation and redemption, crime and punishment, morality and forgiveness.</p>	<p>Specimen paper questions.</p> <p>Open and closed style examination questions.</p> <p>Mock exam 1 in November</p> <p>Mock exam 2 in March</p>	<p>Term 1 and 2</p> <p>Revision term 2/3</p>
<p>Final examinations</p>	<p>Paper 1 – Component 1: Foundational Catholic Theology</p> <p>Paper 2 – Component 2: Applied Catholic Theology</p> <p>Paper 3 - Component 3: Judaism beliefs and practices</p>	<p>1hr 30 min.</p> <p>1hr 30 min.</p> <p>1hr</p>	<p>May 2023</p>

Subject Area: COMBINED SCIENCE

Syllabus Code: Trilogy 8464

The Combined Science course covers content across the Biology, Chemistry and Physics disciplines and will be delivered to students through 5 hours of teaching per week, taught by subject specialist teachers. The Combined Science course is worth two GCSEs.

In May/June 2025 students will sit 6, 1 hour 15 minute exams, where they will be assessed on all of their learning from the two year course. Pupils may be entered for Higher or Foundation tier. The Higher paper allows pupils to achieve grades 9 to 4, the Foundation paper allows pupils to achieve grades 5 to 1.

Students will participate in 16 pre-set practicals over the course of two years. Examination questions will be based upon the skills and knowledge gained during the practicals as well as the subject content delivered during lessons.

SUBJECT	TOPICS COVERED
Biology	<ol style="list-style-type: none">1. Cell biology2. Organisation3. Infection and response4. Bioenergetics5. Homeostasis and response6. Inheritance, variation and evolution7. Ecology
Chemistry	<ol style="list-style-type: none">8. Atomic structure and the periodic table9. Bonding, structure, and the properties of matter10. Quantitative chemistry11. Chemical changes12. Energy changes13. The rate and extent of chemical change14. Organic chemistry15. Chemical analysis16. Chemistry of the atmosphere17. Using resources
Physics	<ol style="list-style-type: none">18. Energy19. Electricity20. Particle model of matter21. Atomic structure22. Forces23. Waves24. Magnetism and electromagnetism
